

Scaled Agile Inc. Leading the AI-Native Organization

A workshop for gathering organizational insights and connecting them into an AI strategy.

Course Duration: 1-day | Prerequisite: Non required

Certification: Accreditation upon passing an examination

About this certification training –

A workshop for gathering organizational insights and connecting them into an AI strategy.

- A single-day facilitated working session (in-person or remote) that transforms scattered AI learning into aligned priorities, credible strategic bets, and a roadmap your leadership team can execute with confidence.
- Built by Scaled Agile—the team that created SAFe, trusted by thousands of organizations worldwide to navigate complex transformation at scale.

What you will learn –

- Strategic alignment across your leadership team. A shared fluency to evaluate AI opportunities, not just react to hype or hedge on decisions.
- Prioritized AI initiatives with named owners using our AI Money Map. Define what to accelerate, what to explore, and what to stop with explicit next steps.
- Clear milestones, success signals, and leadership commitments that drive momentum beyond the session.
- Agreed principles, ownership, and interim policies that enable speed while managing risk.

Who is this certification for –

For leadership teams that approved AI pilots months ago— but those initiatives are stuck between vision and execution, not because the technology doesn't work, but because your organization doesn't know how to metabolize it.

For leadership teams where AI meetings surface more questions than decisions— because everyone has different definitions of “AI strategy,” and the shared fluency to make credible bets doesn't exist.

For leadership teams watching competitors gain ground— knowing they're building advantages you can't close later, while your team is still figuring out where to start.

Get AI-Native Certified –

After completing the course, you'll be eligible to take the **Leading the AI-Native Organization exam**. Passing the exam earns you a globally recognized certification and demonstrates that

you have the fluency to apply AI responsibly, redesign workflows, and accelerate value in your organization.
